

LIVE ONE WAY BROADCAST TO WEBRADIO, COMBINED WITH LUCI® EDIT IT CAN EVEN PLAY PRE-RECORDED MATERIAL WHILE BROADCASTING

Congratulations with your choice of Luci® live one ! Luci® live one transforms your PocketPC or Smartphone into a high quality live internet broadcasting source. Until now you had to use very expensive satellite-time or the like. Now, with the emergence of free - even open source - internet radio servers, high-speed wireless internet access and the use of Luci® live one , the cost of live broadcasting is practically zero. We have also built in the possibility to record while broadcasting live, so when something goes wrong you always have your original recording to send later on.

Luci® live one has the Luci engine ´under the hood´: you can depend on reliable technology and software, while many features of Luci are also available in Luci® live one, like Input-equalizing and support for high-quality accessories. Luci® live one can even play pre-recorded material while broadcasting!

It is also completely compatible with Luci basic and Luci edit. So a project created in Luci or Luci edit can be loaded into the live one software and played in a live broadcast and vice-versa.

The main features of Luci® live one are listed below

- Shoutcast or icecast server compatible
- Record while broadcasting
- Play pre-recorded material while broadcasting if combined with Luci® or Luci® Edit
- Real-time mpeg-conversion to mp2, 48 KHz sample-rate, 32 to 256 kbps.
- Excellent broadcast quality
- Application also available for personal computer or laptop
- Free helpdesk via email at support@luci.eu

This manual consist of 4 main chapters
