START SETUP IN YOUR PROGRAMS FOLDER

Select page FTP

FTP or file transfer protocol is used to transfer files across the internet.

Publishing via FTP is the preferred way to send your reported items.

Start Setup in your Programs Folder

Select page FTP

EXPLANATORY FIELDS AND BUTTONS

Allow profile selection in Luci

If you have more than one FTP-server (profiles) you regularly use to publish to in Luci, you can allow the user to choose the appropriate server each time at the time of 'Publish'. Mark the box to allow this.

Profile

You can store up to 5 profiles for the FTP server. Select the profile you wish to use. If you then 'Publish' with Luci you can choose 1 out of these 5 profiles. Each profile can have different values for the following fields:

FTP server

Fill in the name of your server you use to upload all your items. For instance 'ftp.test.com'. To change the port-number from the default (21) to a different one, type in ' :port-number'. For instance: 'ftp.lucinl.com:23'

User

Fill in the user-name you use to login at your server.

Dest.Dir

Fill in the destiny folder you want to use on your ftp-server .

Password

Fill in the password belonging to your user name.

Passive

Checked means 'Passive' mode. Otherwise it will be 'Active' mode. These are 2 modes for contacting your ftp-server. Contact your network-manager to decide which mode to use.

Test

You can test your ftp-settings with this button.

Resume transfer silently

If your connection gets lost during a transfer via FTP, Luci can keep trying to send indefinitely without asking. Normally Luci will ask you if you want to resume sending a broken transfer. If your FTP server allows it, Luci will only send the part that has not been sent yet.

Go to adjust the next page or press OK to save and leave Setup.
