

EMAIL

The screenshot shows the 'Email direct' configuration window. It includes a 'Profile' dropdown, an 'SMTP Server' field, a 'Server needs authentication' checkbox with a 'Test' button, 'User' and 'Password' fields, and an 'Account for email via outbox:' dropdown menu with 'ActiveSync' selected. 'OK' and 'Cancel' buttons are at the bottom.

START SETUP IN YOUR PROGRAMS FOLDER

Select page Email

If you want to publish (send) your reported items via email, there are two ways: via the standard way via the Outbox or the direct way in which Luci acts as a mail-client and sends the published email immediately when you press 'Publish'. The direct way saves memory and time because no separate email has to be composed and saved in the Outbox. Use of the Outbox however enables you to store emails when at the time you have no internet-connection. In both cases you must remember that with email you have to send 33% more data compared to when you use FTP.

EXPLANATORY FIELDS AND BUTTONS

Profile

You can define up to 5 profiles for the SMTP server. Select the profile you wish to use. If you then 'Publish' with Luci you can choose 1 out of these 5 profiles.

SMTP server

Fill in the name of your server you use to send emails direct. For instance 'mail.test.com'.

Server needs authentication

When you are on the road you can log-in to any internet provider you encounter. But most email servers will not allow you to send an email via them when you are connected through another provider (you get the message 'relaying denied'). But when you can login to your SMTP-server you often ARE allowed to do that (relaying possible). This way you can keep the email-settings the same, regardless of how you are connected to the internet.

User

Fill in the user name you use to login at your SMTP-server.

Password

Fill in the password belonging to your user name.

Test

Press this to check if your server-settings are correct.

Account

Set the email account you want to use when you use the Outbox.

Go to adjust the next page or press OK to save and leave Setup.
