

PUBLISH

START SETUP IN YOUR PROGRAMS FOLDER

Select page Publish

Now you choose the way you are sending out your recordings according to your FTP or Email settings.

EXPLANATORY FIELDS AND BUTTONS

UMID

Country

Type in your country-code (according to ISO 3166-1).

Org.

Type in your Organization-code issued by the SMPTE.

User

Type in your user-code within the Organization.

Bwf extension

Type in the extension you want to use in the name for your published Broadcast Wave (BWF) files. Normally 'wav', 'bwf' or 'mp2'. It depends on your newsroom-system you use what is best. For instance if you have a project called 'test', and you set the extension to 'wav', Luci will publish a file called 'test.wav', but it will always contain mp2-compressed sound-data.

Enable to file

Besides publishing through the internet you can also publish to a file on your PDA. To enable this, you mark this box. You then get 2 extra menu-items in the main Luci program called 'Publish → clip to file' and 'Publish → cliplist to file'.

Enable images

When marked, this will enable you to choose an image or video to transfer as well, when you choose 'Publish' in Luci.

Auto-connect

When marked, Luci will try to establish a GPRS or 3G/UMTS connection when no wifi is available. But only when you start Publishing.

Send through

Choose how you want to publish files with Luci: via FTP, Email-Outbox or Email-direct (see Setup FTP and Setup Email).

Go to adjust the next page or press OK to save and leave Setup.
