

PDAUDIO

START SETUP IN YOUR PROGRAMS FOLDER

Select page PDAudio

With this Tab you can activate the PDAudio-card of Core-sound.

With PDAudio, Luci records always mono, the left-channel. Luci Edit can record mono or stereo. Supported sample-rates are 44.1 , 48, 88.2 and 96 kHz.

EXPLANATORY FIELDS AND BUTTONS

PDAudio digital input

Choose to use the optical or coaxial input or none at all (Off) in which case you use the normal PDA's mic-input.

If you insert the PDAudio-card and you get a message 'unrecognized card', you can tap 'Install driver' which installs the necessary driver on your PocketPC. Re-insert the card, no error-message should appear, so you are ready to start recording digital audio.

Go to adjust the next page or press OK to save and leave Setup.
