

CLIPEDITOR

STEP 3

You have made a number of recordings in the project 'test' and it is guaranteed that there will be some rubbish at the beginning and the end that you do not want to use and perhaps some recordings that you will want to discard altogether. Both the clip editor and editor now come to good use.

Choose menu Tools → Clip Editor

All the recorded files are presented neatly in chronological order. Here you can listen to all the recordings and change the playing order, remove them and add old recordings. Also the total length of all the recordings of the complete clip-list is mentioned at the bottom.

Insert adds a file before the cursor
Remove removes the file that is under the cursor from the clip list

Moves the clip up in the list

moves the clip down in the list

You now see 3 recorded clips for example, quickly listen and if you decide to remove number 1 for example you just place the cursor on the file and press remove.

To change the name of a recorded clip in the list, press on its name and type in the new name.

To edit a recorded clip go to STEP 4, the editor feature.
