

## PUBLISH

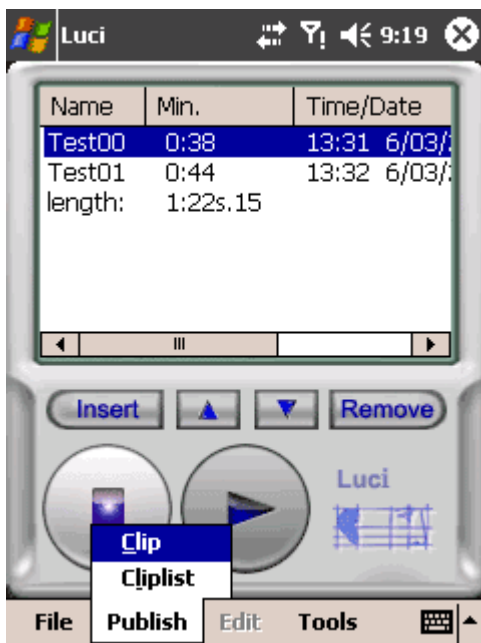

### STEP 5

If you wish to write accompanying text for the editor

choose menu Tools → Edit Text

The text will be sent later with the interviews.

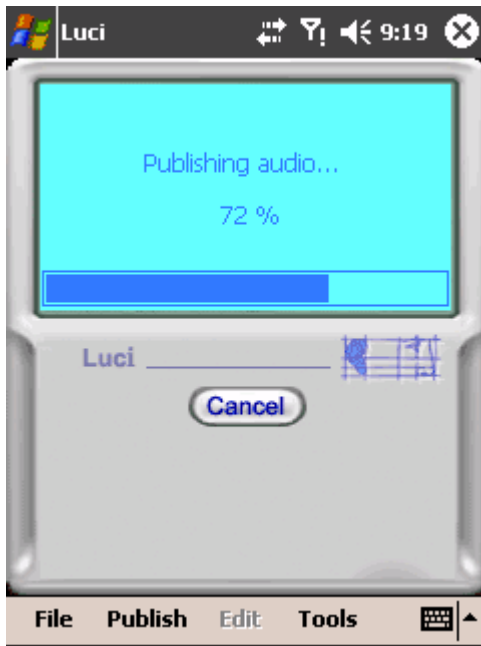

If you wish to send the complete clip list pasted together as 1 large file:

choose menu Publish → Clip List

If you only wish to send the clip the cursor in the clip editor is pointing at:

choose menu Publish → Clip

Luci will use the 'Broadcast Wave Format (BWF)' which can easily be processed by any professional newsroom system. To see a list of BWF chunks that Luci writes consult the **Technical Specifications Manual**.

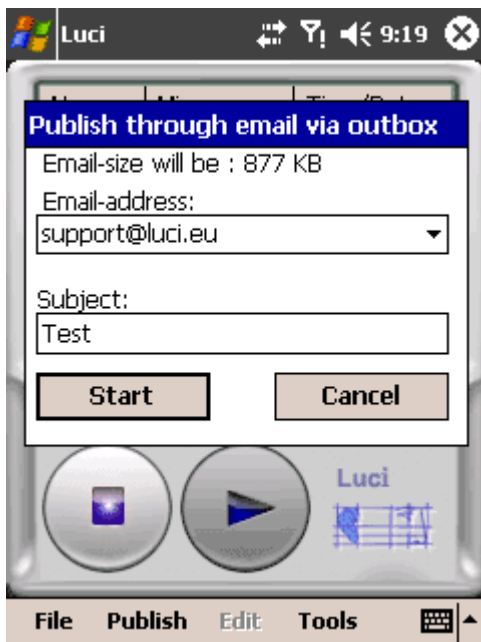

### Publish by FTP

If Luci was setup to use FTP for publishing, a progress-window will immediately appear indicating the progress of the FTP upload.

Luci will then immediately send:

- one file containing the sound-data and the first 256 characters of the accompanying text you typed
- one text-file (with extension .txt) or XML-file (with extension .xml) containing ALL accompanying text. The choice of whether to write a txt or XML file is dependent on the template-text you choose in LuciSetup

Press cancel to stop the upload, sometimes this might take a little while.

### Publish by Email

If Luci was setup to use Email for publishing, Luci will compose an email that is copied to the outbox of your PDA, ready to be sent, or send the email directly. The email will have the Project-name as the subject, the body of the email will contain ALL the text you typed in while the sound data is attached to your email, with the same naming-convention as via FTP.

Before composing the email, the 'Publish through email' form will appear that enables you to fill in some parts of the email and to check the size of the email, if the email is too big it may not be wise to send it via email. Use FTP instead.

You can now type in an email-address or choose one of the 5 last used email-addresses. You can also change the subject if you like.
