

## PUBLISH WITH IMAGES AND VIDEO'S

### STEP 6

Besides publishing sound and text only, Luci can also publish images and video's with or without the sound and text-files. To be able to publish images and video's you must check the 'Enable images' check-box in the Setup Publish-page.

#### Publish Images together with the sound-file

Besides publishing sound and text only, you have the ability to add images and video's to the files you are sending. Then, if you choose 'Publish', new windows will appear that enables you to choose 1 or more files.

#### EXPLANATORY FIELDS AND BUTTONS

All windows contain the extra fields and buttons you see on the left:

##### Choose Image or Video

Select an image or video to be included in the send-list. The send-list containing all extra files to send will appear

##### Clear List

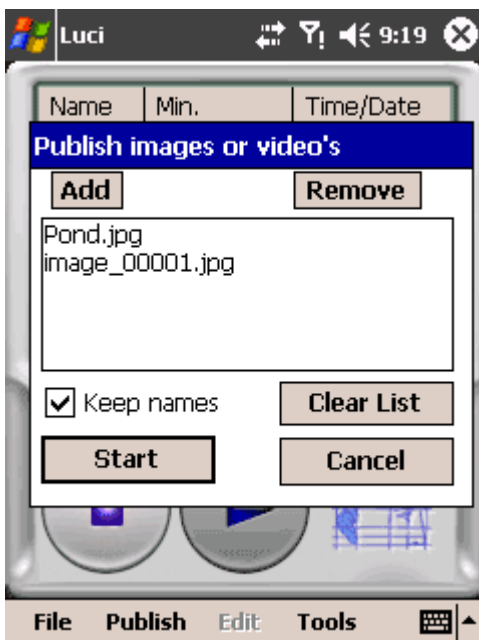

Clears the send-list.

##### Remove Selected

Remove the file that the cursor is on.

#### Naming convention:

The names of the files will be substituted by the project-name appended with an image or video nr, the extension will however remain the same as the original. For example if you send waterfall.jpg and test.avi in a project named test, the following files will be sent: test00.jpg and test01.avi.

#### Publish Images only

You also have the ability to only publish images and video's with the extra menu-item 'Publish Image'. Choose this and the window on the left appears

#### EXPLANATORY FIELDS AND BUTTONS

##### Add

Select an image or video to be included in the send-list. The send-list containing all files to send will appear

##### Remove

Remove the file that the cursor is on.

##### Clear List

Clears the send-list.

##### Keep names

If you don't want to use the naming convention mentioned below, but want to keep the original names: mark this.

#### Naming convention:

The names of the files will be substituted by the project-name appended with an image or video nr, the extension will however remain the same as the original. For example if you send waterfall.jpg and test.avi in a project named test, the following files will be sent: test00.jpg and test01.avi.
